Unless i just dont see it there is zero way to adjust the steering strength. using logitech remote barley touch joystick and car just spins aroind. love the moding and customizing of the car would be a great freaking game if controls where any good at all.. this game does have potential but as of now its not really worth it, yes it is free but it has many problems. problem 1 the physics are terrible and i mean terrible sometimes you just slide through things. problem 2 the backround is horrible to look at because it doesnt move at the same pace your car does and btw motion blur doesnt solven this. problem 3 the fact you have to wait to repair your car repairing your car should be instant and free not timed like a mobile game. problem 4 the video settings screen is lacking, there is no fxaa nob,no mxaa, basically no antiallasing switches at all. nuow heres one thing that is reedeming about this game, it is genuinly fun to go into servers and drift, but that its for the pros. i do think this game has potential but it needs to improve

. i mean is a great game. its free i cant compail. but the thing is u need money for alot of things but u dont earn it that quick mostly of the cars you need to pay irl money. but you can buy some cars if u want just to simple be drifiting a little bit this is a game for u. its fun when you actually drift but it needs alot of work. Game feels pretty solid. Needs some work but it has potential.. I just want to start by saying that you should not listen to the reviews saying negative things about this game. All of them have the same thing in common. 0.1 hours played.

High Octane Drift is very fun and easy to get a handle on. It definetly is not like any real drifting, but that is almost the beauty of it. It's a new mechanic to learn and it's fun to practice it and get better.

The customization of cars is awesome. There are not as many cars as I would like, but it's still in development. Modifications are very good. There are many different options with pros and cons on each part. I would like to see more body kits and exterior modifications, but again, I still have hope for the future.

When first starting there is a tuorial of some sort... For me it was buggy and not helpful at all. I did resort to asking other people online (Mostly everyone online is pretty cool too) about things and using Google. After playing and messing with things on my own, it came along pretty quickly.

Microtransactions are 100% not needed and not intrusive at all. You do get an edge by paying real money, but name a game that you dont get an edge by paying.

There is also a mechanic where you must repair your vehicle, buy tires, buy fuel, etc. At first I was very turned off by this, but it is not bad at all.

Overall High Octane Drift needs some work to be better, but being in open development means they will gradually improve! I'd definetly say play this game and spend at least 30 minutes in it. Can't exit out of this garbage game because the main menu is greyed out and hitting ESC does nothing.. Well, I used to play a lot, but then I quit for a few reasons, not game reasons, community reasons. The game is really good, tends to lag just a little, but it's not intolerable. The community is 90% give or take good, and there's the rest of the players that purposely bump into you, or mess you up in a rival, or cuss often, etc..

---

it has crappy handling. \u2665\u2665\u2665\u2665\u2665 game DOESNT EVEN HAVE A QUIT BUTTON. It is gay that you use tiers when you are practicing and if you want more tiers you ned to pay.. Super fun game, lots of customization and one of the best ftp games ive played :D. It is a drifting game, so yeah.  
I recommend you download and try it for urself, IT IS FREE!
